

"Leveraging Procedural Sedation for Canine Patients"

Procedural sedation is often an underutilized tool for small practitioners. This educational program will demystify the concept of procedural sedation and its use in dogs. Detailed information on a novel sedative, a combination of the alpha-2-agonist, medetomidine, with the peripheral alpha-2 antagonist, vatinoxan will be provided. Real-world cases highlighting the use of this sedative will demonstrate how to leverage procedural sedation in your clinic.

Presented by:

Kasey Crabb, DVM

Professional Services Veterinarian, Dechra Veterinary Products

Dr. Crabb Completed her undergraduate degree at Texas A&M University before earning her veterinary degree from Iowa State University. As a born and raised Texan she quickly returned to Texas after graduation to companion animal general practice. Her practice experience includes canine and feline care, surgery, emergent care, dermatology, and dentistry. She joined Dechra as a professional services veterinarian in 2024. Dr. Crabb lives in Austin, Texas with her husband, two pitties (Marty & Rona), cat (Pepperjack), and herd of Nigerian dwarf goats. Dr. Crabb has passions in cooking, baking, and traveling the world

Wednesday, April 23, 2025
