

Synopsis " Nutritional Management of Canine Cognitive Dysfunction and Degenerative Joint Disease"

Dr. Julie Lassere, Professional Consulting Veterinarian
Hills Pet Nutrition

Wednesday, July 23, 2025

6:30 PM, Zea Rotisserie, Covington LA

This document summarizes key information from a presentation focused on improving the quality of life for senior dogs.

It's important to note that senior pets are prevalent, with 52% of owners having a pet aged 7 and older. As dogs age, brain function tends to decline. Notably, 50% of dogs over the age of 8 exhibit signs of cognitive changes.

The presentation highlighted several key topics to consider.

Key Takeaways

- The presentation focused on methods to improve the quality of life for aging canine companions.
- A significant portion of pet owners, 52%, have pets that are 7 years of age or older.
- Age-related cognitive decline is common, with 50% of dogs over 8 showing noticeable changes.
- A specialized tool can assist in identifying signs of cognitive decline in senior dogs.
- Appropriate nutrition and environmental enrichment can play a crucial role in slowing the progression of age-related cognitive decline.
