

Mast Cell Tumors in Dogs and Cats

This presentation will cover the biological behavior of mast cell tumors in our canine and feline patients. We will discuss the variations between the dermal and subcutaneous forms and will recall how to determine their aggressiveness and extent. With this in mind, we will converse about the various treatment options we have including surgery, radiation therapy and chemotherapy including standards of care (vinblastine, CCNU and Palladia), Stelfonta, Gilvetmab and electrochemotherapy.
