

Program Provider:

MedVet

Program Date:

Tues., June 9, 2026
6-7pm CT

Program Title and Credit Requested:

It's in the Bag: The Complete Breakdown of Blood Banking & Blood Products
1.0 credit hour

Program Description:

This live interactive medical program for veterinary professionals will provide a comprehensive overview of the blood banking process from collection through administration. This course will cover product selection for treatment, administration protocols and required observation periods, administration selection, and filter types.

Agenda/Outline:

- Introduction
- Overview of blood banking process
- Packed red blood cells (PRBC)
- Plasma products
- Platelets
- Whole fresh blood
- Blood typing and administration selection
- Transfusion observation protocols
- Recognizing and treating potential anaphylaxis
- Q&A

Learning Objectives:

#1: Identify and differentiate blood banking products.

#2: Describe the blood typing and cross matching process to support appropriate product and administration selection.

#3: Recognize transfusion reactions and apply appropriate administration protocols and observation procedures in a clinical setting.

Presenter:

Morgan Jarrell, CVT
